

Overview of an Innovative Community Air Monitoring Program in the SF Bay Area

Marilyn Bardet, Kathy Kerridge, Nancy Lund, David Lindsay, Bart Sullivan, Benicia Community Air Monitoring Program, Benicia, CA

<https://www.fenceline.org/bcamp/>

Our Location

BCAMP: Operational in 2022

- ▶ Site: Vacant communications building on Ruszel Woodworks Property
- ▶ Contractor: Argos Scientific Inc. <https://www.argos-sci.com/>
 - ▶ Argos expertise and experience has been key to the success of BCAMP
- ▶ Equipment included: meteorological instruments and an array of state-of-the-art air monitoring instrumentation
- ▶ BCAMP is an independently operated 501(c)3

Location

Ideal location: Close to highway, railroad, refinery/asphalt plant, and port

BCAMP Basics

▶ Purpose:

- ▶ to independently operate air monitoring
- ▶ to measure local ambient air quality in real time and archive and report data collected
- ▶ to provide education
- ▶ to operate a public access website

Air Monitoring Equipment

Testing for:	Equipment Type	Minimum Detection Limit	Vendor
Benzene	Open-path UV	3 ppb	Argos Scientific
Toluene	Open-path UV	2.5 ppb	Argos Scientific
Xylene	Open-path UV	2.5 ppb	Argos Scientific
Sulfur Dioxide	Open-path UV	30 ppb	Argos Scientific
Hydrogen Sulfide	Point Monitor	2 ppb	Teledyne API
Black Carbon	Point Monitor	0.05 microgram / m ³	Magee Scientific
Particulate Matter: 10, 2.5, & 1 micron	Point Monitor	5 micrograms / m ³	South Coast Sciences
Ozone	Point Monitor	10 ppb	2BTech
Wind Speed/Direction, Temperature and Pressure	Anemometer		RMYoung, and MetOne

Equipment Selection and Operation

- ▶ Equipment is commonly used by regulatory agencies
- ▶ Systems are operated based on regulatory guidances (BAAQMD Regulation 12 Rule 15)
- ▶ Monthly calibration checks performed NIST traceable gas standards

The net result is legally defensible credible data!!

Our station

Summary: BCAMP is an information resource for the benefit of the community

- ▶ Data provided used by the community and by researchers to:
 - ▶ Help locate high emission sources
 - ▶ Ascertain the impact of wildfire smoke
 - ▶ Aid emergency responders in the event of a release event
 - ▶ And.....so much more
- ▶ Data is even more valuable when used in combination with a network of monitoring stations in the area

Two examples of how BCAMP data has benefited the community

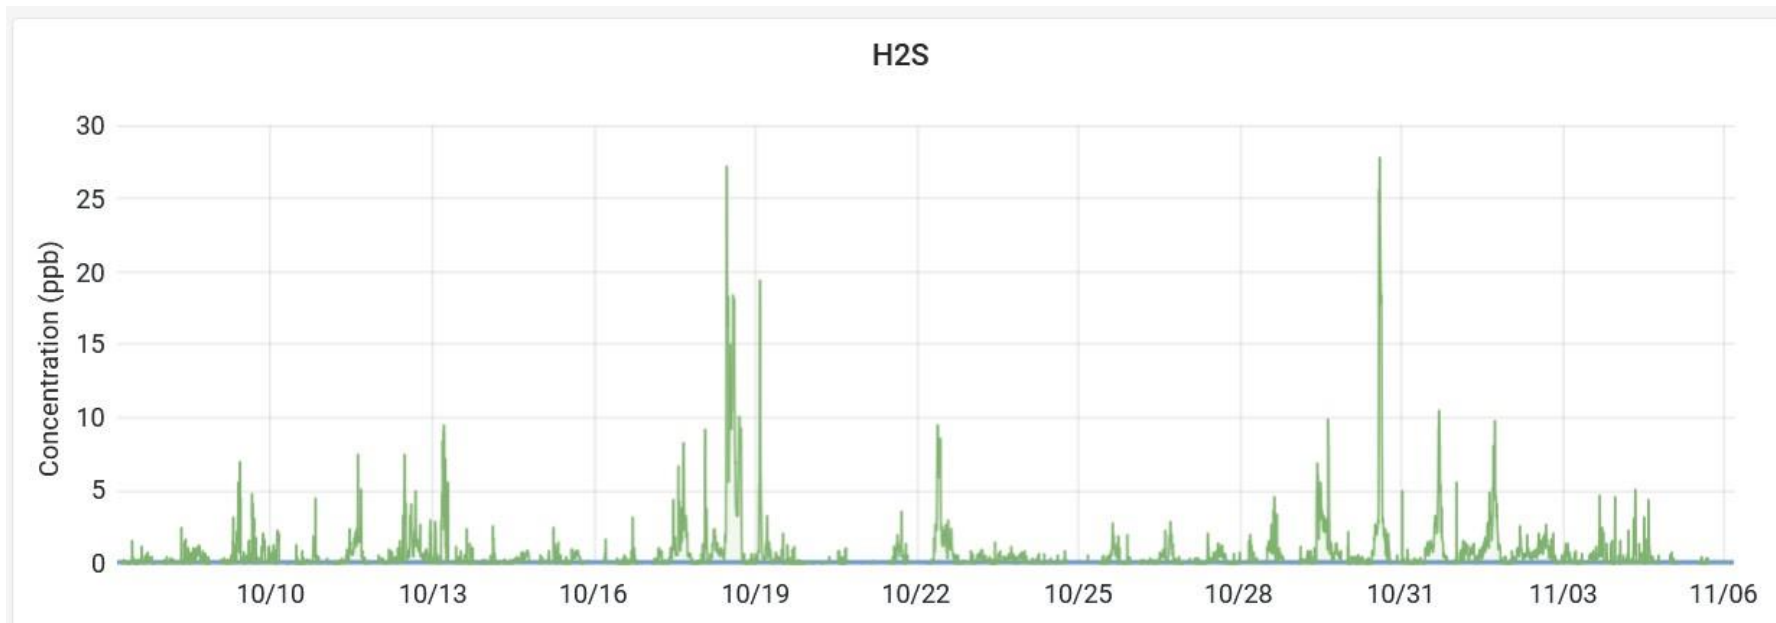

Example 1 - Detecting H₂S and identifying the emission source

Example 2 - Validating real time fence line data at a refinery

Example 1

H₂S and wind graph

The BCAMP air monitoring systems are set to report data continuously. But looking at the historical data helps in identifying pollution sources.

Example 1

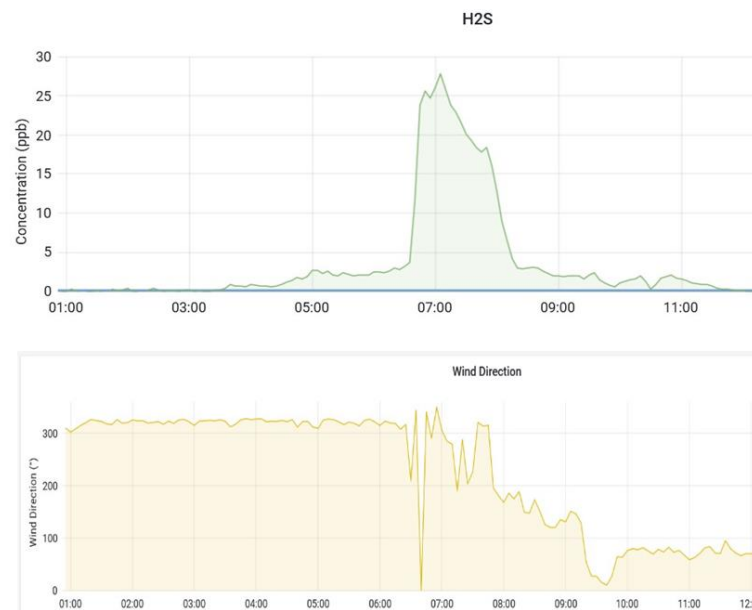

H₂S and wind graph

In this example, we were able to trace back the H₂S detection on October 31, 2023 to the local refinery which is located north of the BCAMP Monitoring Station

Data Source - Valero Refinery Real-time Fenceline

Data Source - BCAMP Community Air Monitoring Station

Example 1 - H₂S Detection and Source Identification

- ▶ The H₂S detection at the BCAMP Station was:
 - ▶ Above odor thresholds
 - ▶ Above Community Action levels
 - ▶ Based on Met Data wind was coming from the northwest
- ▶ At the same time as the detect the Valero Monitoring Stations:
 - ▶ Showed detection of H₂S from their southern point monitoring station
- ▶ The BCAMP data shows the migration of the H₂S plume from the refinery into the community

Example 2 - checking accuracy of refinery data

- ▶ Local EJ community concerned about real-time fenceline data being reported at local refinery
- ▶ BCAMP worked with subject matter experts to review data
- ▶ It was determined that some of reported gases on the refinery fenceline system made no sense.
- ▶ Example - Ozone readings were zero during the afternoon hours even though it is well known that ozone is almost always present in the Bay Area during these time periods.
- ▶ Data from refinery air monitoring program that is under BAAQMD Regulation 12 Rule 15 was thrown into question.

BCAMP's Assistance to the EJ Community

- ▶ BCAMP responded by installing a Federal Equivalent Method Ozone monitoring station at a community member's home near the refinery
- ▶ Set up a website to demonstrate to the community the actual ozone concentrations in the air
- ▶ The results of the BCAMP monitor trend the local air monitoring stations operated by the BAAQMD
- ▶ The refinery fence-line systems do not

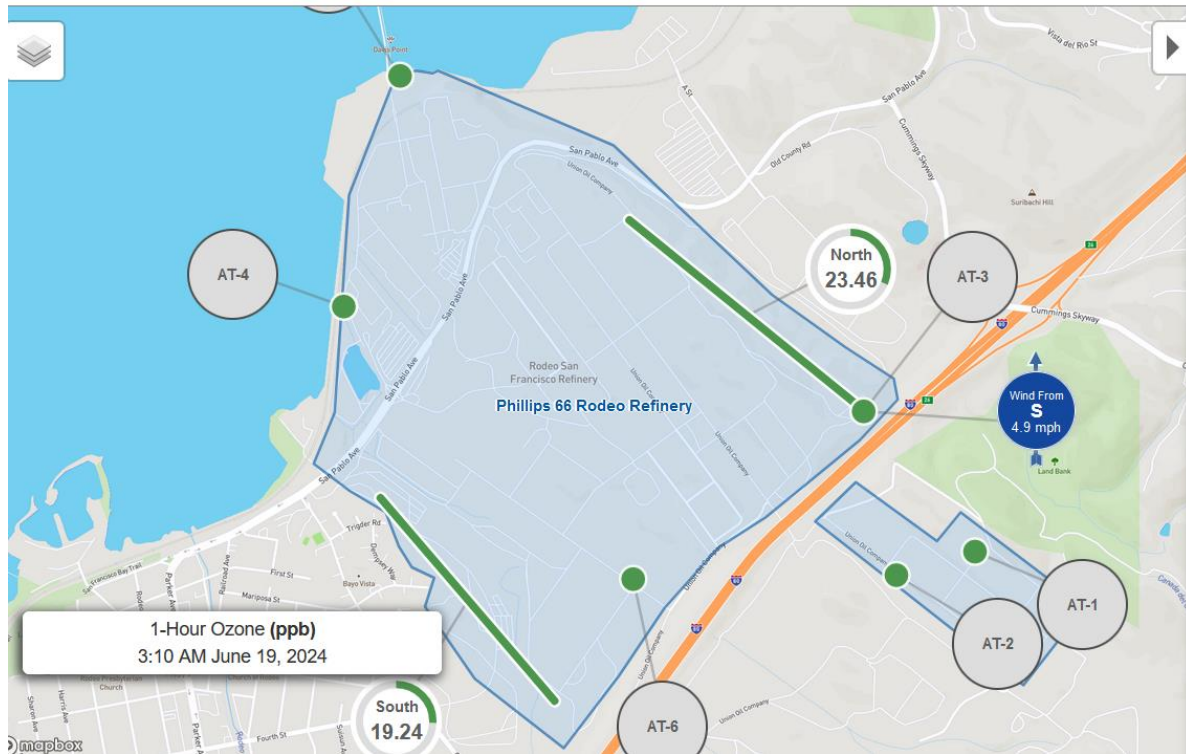

Example of Community Benefit

1-HOUR AVG

Ozone

All data shown are preliminary until validated every 90 days.

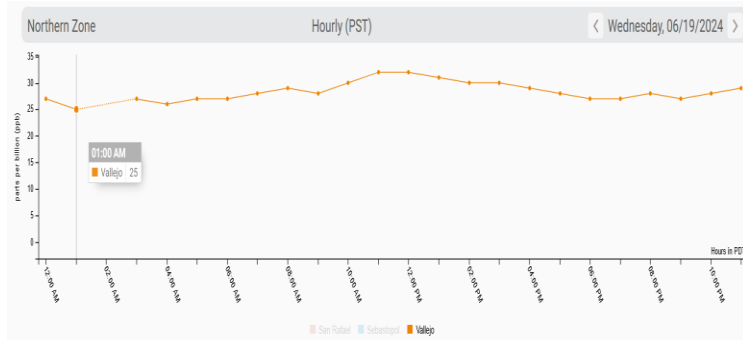

Fenceline Monitors **North** **South**

Synchronize Graph with Map Display

Ozone is a gas that ranges from colorless to blue and has a strong odor. It is the main

This example shows the ozone being reported by the refinery in the EJ community. Note that during a period of this time, the north fenceline system failed to report data.

Community Benefits of BCAMP

- ▶ Community has a resource they can trust
- ▶ The Bay Area Air Quality Management District (BAAQMD) are now much more focused on air quality monitoring in Benicia
- ▶ System design has allowed BCAMP to support other EJ communities in the refinery corridor
- ▶ We have become a better advocate - ripple effect. We mobilize other EJ community members to advocate for better monitoring, regulations and enforcement

Community Benefits of BCAMP

- ▶ Nearby EJ communities have access to actionable and credible real time data
- ▶ Smell My City uses the information for Community Alerts when pollution levels exceed safety thresholds
- ▶ Researchers use our information directly without a public records request.
- ▶ Data Quality is high enough that local regulatory agency considers the data actionable

Website Features

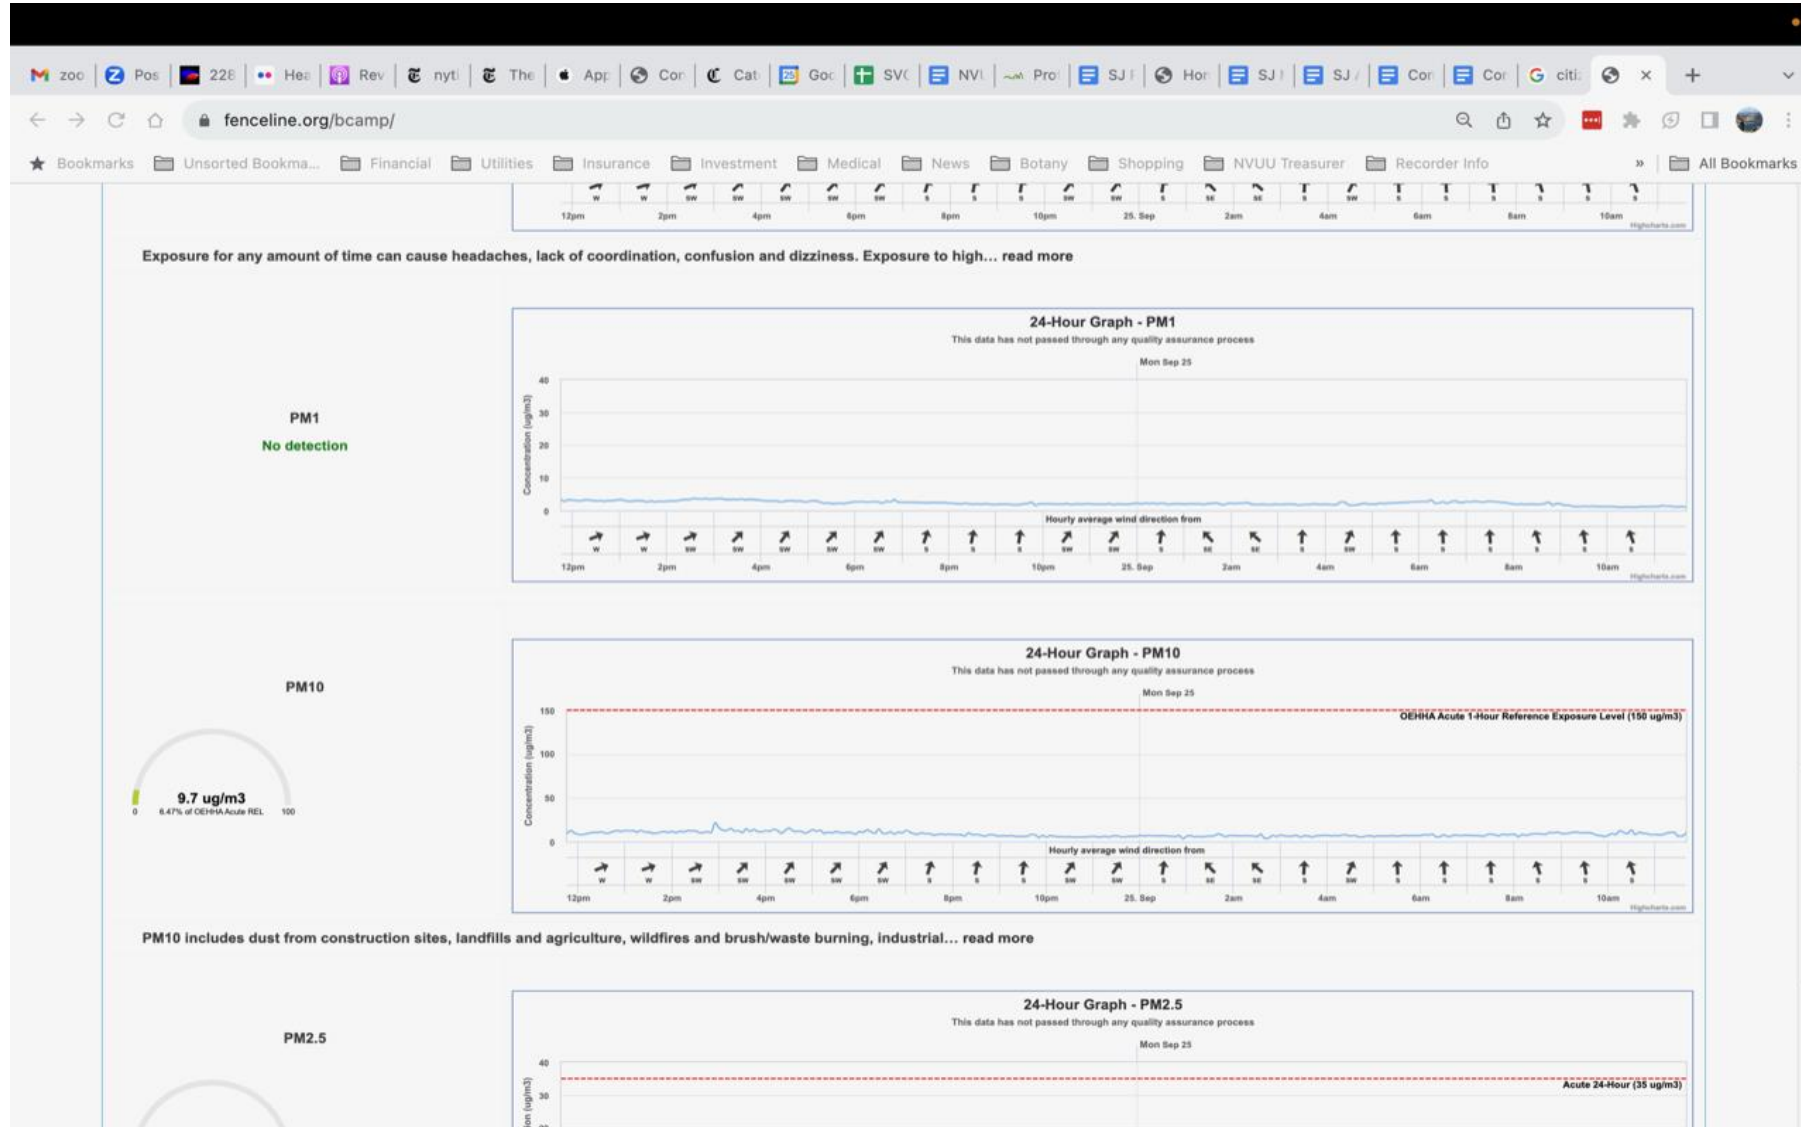

- ▶ Link: <https://www.fenceline.org/bcamp/>
- ▶ Real-time data
- ▶ Data History
- ▶ Links to report an air quality issue
- ▶ Reference links for additional information

The Future

- ▶ More and broader advocacy
- ▶ Help other EJ communities if they need monitors
- ▶ Test site for evaluation of new equipment
- ▶ Help establish independent stations along the refinery corridor
- ▶ Work more closely with refineries to pinpoint emissions
- ▶ Develop strategies to continue funding by working with Environmental Justice Communities in the Bay Area

Website

Advocacy: Showing the station to our current state Assemblywomen Lori Wilson

Station opening with local officials, air district and community groups

2003

- Good Neighbor Steering Committee and others campaign to ensure safety and air monitoring
- Settlement Agreement with Valero Refinery and the city included air monitoring
- Air monitoring was in the trailer in the Valero buffer zone

Agreements between Good Neighbor Steering Committee and Valero

- 2008 - \$14,000,000 for community, \$250,000 for community air monitoring
- 2019 gave BCAMP a total of \$460,000 in funding
